

MAKE A CLEAN BREAK

With **500000** revenue-service miles,
HybriDrive™ propulsion systems are a breath of fresh air.

Reducing vehicle emissions without compromising performance demands innovation. BAE SYSTEMS Controls has combined advanced components and breakthrough control technology in the clean-running HybriDrive™ propulsion system. With no transmission, a constant-revving engine, and regenerative braking, hybrid electric buses perform better and use less fuel. Best of all, this capability has been demonstrated in half a million miles of revenue service in cities from New York to California. It's yet another innovative solution from the systems company innovating for a safer world.

For more information on how the HybriDrive™ propulsion system can help you make a clean break, visit www.hybridrive.com
